 The Climate Action Reserve's GHG emissions reduction project protocols provide regulatory-quality guidelines for project development and the quantification of carbon offset credits, known as Climate Reserve Tonnes (CRT). These protocols are widely regarded as among the highest quality standards for carbon reduction projects.

These carbon offset represent the reduction of a specific quantity of greenhouse gas (GHG) emissions. By purchasing these offsets, you alone have the right to all associated claims about the environmental benefits they embody. Carbon offsets are to be regarded as a real environmental commodity, not a donation or investment in a future emissions reduction project. The verified GHG emissions reductions you purchased are sourced from projects that have been validated and registered under high-quality project standards.
